Brown Bag Lunchtime Seminar (Via Zoom)
(Theme: Cognition and Neuroscience)

Time Perception Deficit in ADHD and Its Correlations with Early ADHD Symptoms and Early Academic Abilities

12:30 p.m. – 1:30 p.m. | August 26, 2022 (Friday)

Jeanne ZHENG Que
Ph.D. student
Department of Psychology
The University of Hong Kong

Abstract
Children with ADHD were often observed to have neuropsychological deficits such as executive dysfunction, delay aversion, and a recently proposed deficit, time perception deficit. The role of time perception deficit in ADHD has rarely been investigated, especially in young children. To further understand the role of time perception in ADHD, three studies – a meta-analysis, an observational and longitudinal study, and an intervention study – were conducted. The findings highlighted the important role of time perception in ADHD symptoms and early academic abilities and provided directions for future diagnostic and treatment practices for children with ADHD.

About the speaker
Jeanne Zheng is a final year PhD student supervised by Dr Kathy Shum. She is interested in early childhood development and learning. Her current research focuses on the neuropsychological profiles, daily functioning, and academic performance of young children with or at risk of ADHD.
